Significance of Adolescent Depression

Past Year Prevalence of Major Depressive Episode Among U.S. Adolescents (2020)

Data Courtesy of SAMHSA

50% of all lifetime mental illness begins by age 14, and **75%** by age 24

Relapse rate of 40% within 2 years; 75% within 5 years

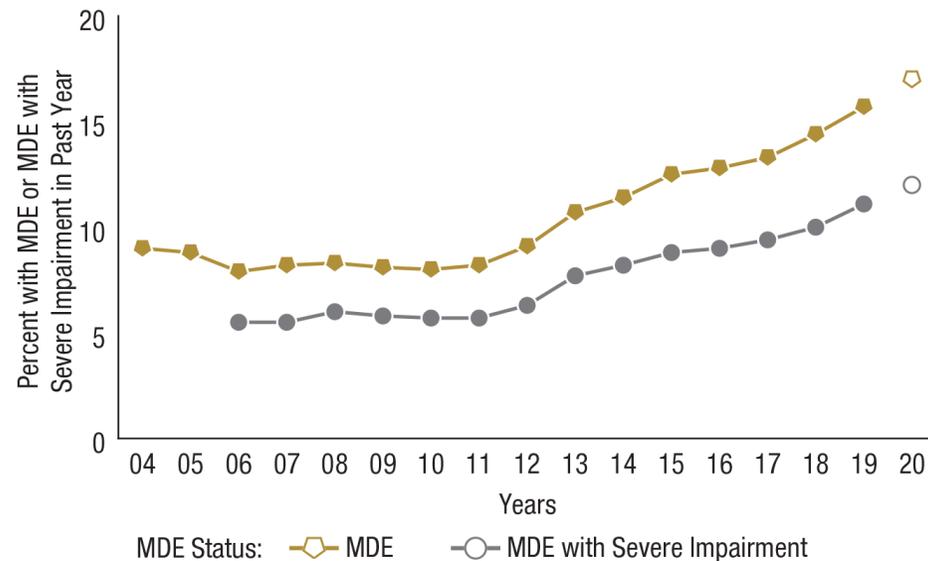

Prevalence of major depressive episode was **highest among adolescents reporting two or more races (29.9%)**

<https://www.nimh.nih.gov/health/statistics/major-depression>

Rates of Adolescent Depression are Increasing Annually

FFR1.30

Major Depressive Episode (MDE) and MDE with Severe Impairment in the Past Year: Among Youths Aged 12 to 17; 2004-2020

MDE Status	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020

* Only about 40% of adolescents with depression receive treatment.

Factors that Influence Youth Mental Health and Barriers to Treatment

- **Geographic** barriers (living in a rural area) with fewer resources
- **Financial** barriers (lack of insurance, payer, and hospital factors)
- Racial disparities, **systemic bias**, discrimination
- **Stigma** surrounding mental illness
- **Resource** barriers (fewer clinicians trained in adolescent behavioral health)
- **Regulatory** barriers (lack of confidentiality and self-referral/consent for minors seeking behavioral health treatment)

COVID-19 Impact

1 in 5

young people report that the pandemic had a significant negative impact on their mental health.

of adolescents

of young adults

NEARLY 1/2

of young people with mental health concerns report a significant negative impact.

1 in 10

people under age 18 experience a mental health condition following a COVID-19 diagnosis.

- ✓ Depressive symptom scores and anxiety symptom scores increased for youth from before the start of the pandemic to the months directly following the onset of stay-at-home orders.^{1,2}
- ✓ During the early months of the pandemic, adolescents with more stress due to COVID experienced more symptoms of depression and anxiety.¹
- ✓ COVID-19 is associated with increased symptoms of depression especially for **girls**.^{1,2,3}
- ✓ A survey of Emergency Departments in the US reveals a significant increase in adolescent mental health visits post-pandemic, relative to 2019, and an increase in visits for suicide attempts specifically among adolescent **girls**.^{4,5}

Abstract

Adolescents who experience negative life events may be at risk for depression, particularly those with psychosocial vulnerabilities. We investigate longitudinally the impact of vulnerability/protective factors on the relation between a large-scale negative life event, the COVID-19 pandemic, and depressive symptoms. Adolescents (N=228, M_{age} = 14.5 years, 53% female, 73% white) self-reported depressive symptoms 2–4 months before the pandemic (Time 1), and again 2 months following stay-at-home orders (Time 2). At T2, adolescents also completed measures of vulnerability, protective factors, and COVID-19-related distress. Depressive symptoms increased at T2, and COVID-19 distress interacted with resilience and negative

Role of Primary Care

- **Primary Care Clinics** have been an important **entry point** for adolescent mental health concern
- Routine Depression Screening recommended by primary care
- Primary care physicians often **lack feasible, low cost, acceptable means to intervene to prevent onset** of depressive episodes in adolescents

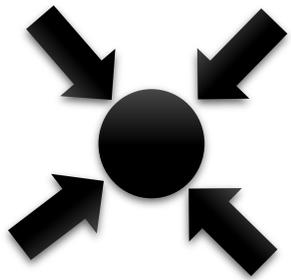

Zuckerbrot, R. A., Cheung, A. H., Jensen, P. S., Stein, R. E., Laraque, D., & GLAD-PC Steering Group (2007). Guidelines for Adolescent Depression in Primary Care (GLAD-PC): I. Identification, assessment, and initial management. *Pediatrics*, *120*(5), e1299–e1312. <https://doi.org/10.1542/peds.2007-1144>

Study Aim

- To explore the process of implementing an evidence-based depression prevention study into **pediatric primary care** settings as described by key stakeholders
 - Specifically, **identify the facilitators and barriers** to implementing recruitment measures in the clinical workflow

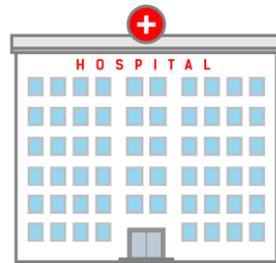

Consolidated Framework for Implementation Research (CFIR)

Domains & Brief Descriptions

Outer Setting

Economic, political, and social context

Inner Setting

Structural, political, and cultural context of the implementation setting

Characteristics of Individuals

Mindsets, norms, interests, and affiliations of stakeholders

Intervention Characteristics

Elements of the intervention being implemented

Process

The active process of implementing the intervention

[The Consolidated Framework for Implementation Research – Technical Assistance for users of the CFIR framework \(cfirguide.org\)](https://www.cfirguide.org/)

Damschroder, L.J., Aron D.C., Keith, R.E., Kirsh, S.R., Alexander, J.A., & Lowery, J.C. (2009). Fostering implementation of health services research findings into practice: A consolidated framework for advancing implementation science. *Implementation Science*, 4(50). Doi: 10.1186/1748-5908-4-50

Methods

- **Qualitative Interviews w/Stakeholders** at the Study Sites
 - 4 pediatric health care settings IL & KY
- **Data Source:** Comparative Effectiveness Implementation Trial (Path 2 Purpose)
- **Analysis:** Modified Grounded Theory
 - ATLAS.ti for organizing/coding

Comparing 2 Interventions for the PREVENTION of TEEN DEPRESSION

Inclusion Criteria

- Teens age 13 – 19
- PHQ-9 score 5 – 18 (within 30 days)

Exclusion Criteria

- NOT currently receiving therapy or counseling for mood-related concerns
- NO history of psychiatric hospitalization
- NO current active suicidal ideation

Enrollment Goal = 664

Enrolling Organizations:

Intervention assigned via cluster randomization at clinic level

TEAMS

- Group therapy intervention
- Conducted online
- Group of 6-8 teens
- Uses Cognitive Behavioral techniques
- 8 weekly sessions (90 minutes); 6 monthly sessions (90 minutes)
- Parent groups on week 1 & week 8
- Led by Masters level therapists

CATCH-IT

- Online computer-based intervention
- Self-directed
- Accessible 24/7 from phone, computer, or tablet
- Uses real life scenarios to teach teens coping skills
- 14 learning modules, 15-20 minutes per module
- Parent = 4 learning modules

CATCH-IT

Dictionary Toolbox I'm Feeling... I Have Questions... In Crisis?

An interactive slide from the Cognitive-Behavioral section of the teen intervention

An interactive slide from the Behavioral Activation section of the teen intervention

Welcome to Z's bedroom. It might look a bit like your room at home, maybe a little more cluttered. Z has a lot of passions, interests, hobbies, and talents. But when they are depressed, they don't really want to do anything. In this activity, help Z get out of a downward spiral by finding the objects that can help Z find a sense of enjoyment or accomplishment. Click or tap on Z's objects to find out which ones are Time-Givers and which are Time-Breakers. You can always pick "Reveal All" to see everything going on in Z's room.

Reveal All

CATCH-IT

Dictionary Credits In Crisis?

- The Basics
- Building Resilience
 - resilience in your teen? Part A
 - 5. ✓ How to promote resilience in your teen? Part B
 - 6. ✓ Skill builder: Resilience in your family
 - 7. ✓ Goal setting with your teen
- Feeling Sad and Down
- Managing Depression
- Depression in Families
- Resources

Skill builder: Resilience in your family

Take a moment to think about some questions about resilience in your family.

Can you think of someone you know who thrives despite really difficult circumstances?

What do you think underlies this person's resilience?

Resilient teens are activists.

- They participate in extracurricular activities, sports, church activities, etc.
- Have a discussion with your teen about their interests.

Resilient teens have close relationships within and outside of the home.

- Ask your teens to discuss how they are feeling about friends and adults in their life.

Are there relationships they feel good about and relationships they would like to strengthen?

Resilient families have fun together. Name five activities your family does together to have fun. Write them down here and then also make a copy to post on the refrigerator as a reminder!

Please be aware that when you type in answers to these questions, the Project CATCH-IT staff will get a record of your responses.

7. Sharing Activity

IDENTIFYING FREQUENT NEGATIVE THOUGHTS

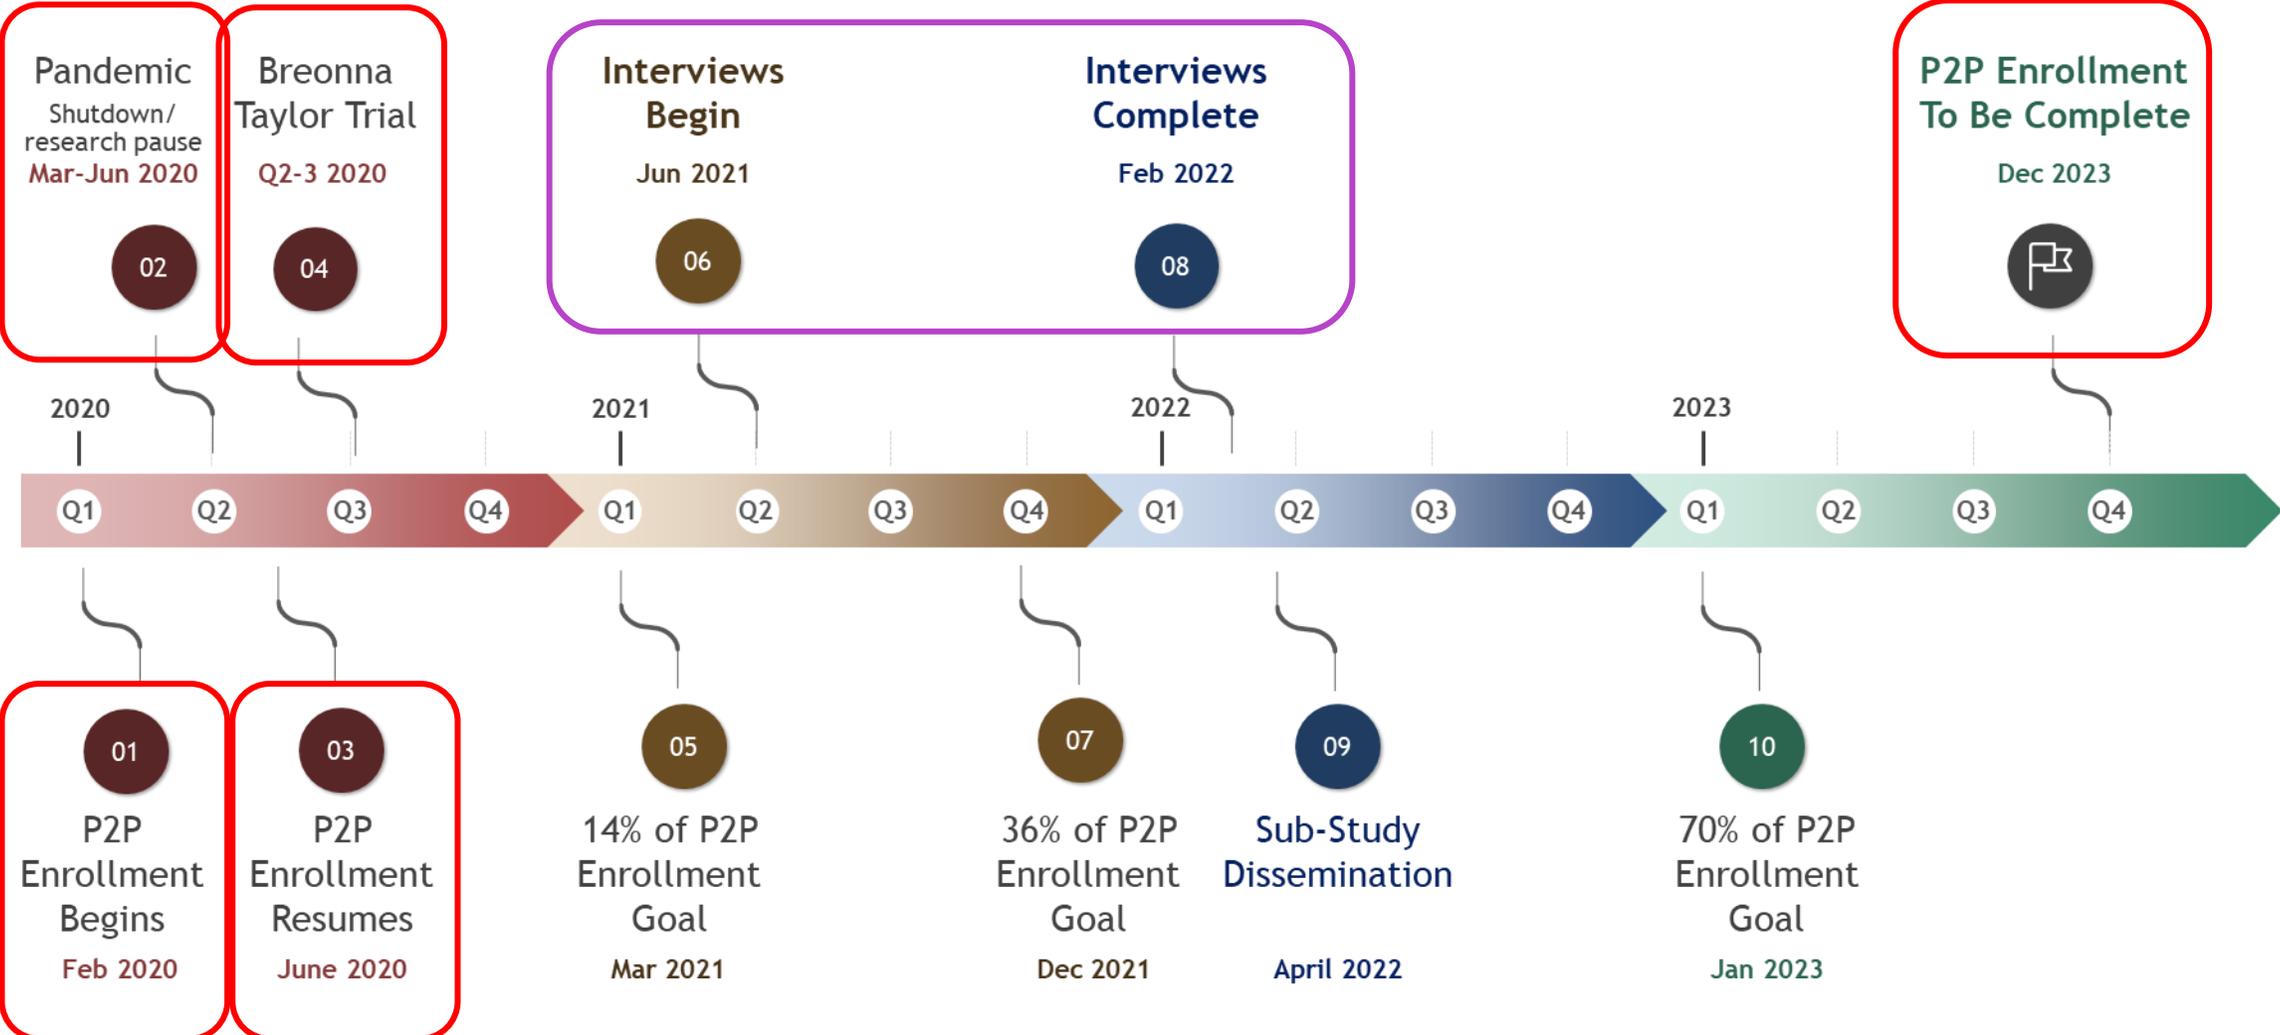

EXAMPLES OF COMMON NEGATIVE THOUGHTS

Check the ones that you've had in the past month

- I'm confused.
- There is no love in the world.
- I am wasting my life.
- I'm scared.
- Nobody loves me.
- I'll end up living all alone.
- People don't consider friendship important anymore.
- I don't have any patience.
- What's the use?
- That was a dumb thing for me to do (or say).
- I'll probably have to be placed in a mental institution someday.
- Anybody who thinks I'm nice doesn't know the real me.

- There is something wrong with me.
- I am selfish.
- My memory is lousy.
- I am not as good as _____ (another person).
- I get my feelings hurt easily.
- I can't do anything right.
- I will never have a boyfriend/girlfriend.
- Things will never work out for me.
- My life is a mess.

P2P and Sub-Study Timeline

Health System Characteristics and Stakeholder Representation in Qualitative Interviews

Health System	Organization Type	Region	Sites	#Interviewed
HS 1	Public University Teaching Hospital and Health Care	Urban, IL	8	20
HS 2	Not-for-Profit Hospital and Health Care	Suburban, IL	4	6
HS 3	University-affiliated, Not-for-profit Hospital and Health Care	Urban, Rural, Suburban, KY	6	5
HS 4	Not-for-Profit, independently owned Hospital and Health Care	Rural, IL	5	8

Implementation Strategies at Clinics – Health System

- **Select and Develop Clinical Site-Champions:** Leverage clinical ladder programs or other internal career incentive programs
- In person **training sessions for Site Champions and Providers** in the clinic, **adapt workflow** to meet their needs
- Q2week **“check-in” calls** w/clinic site champions
- Monthly team meeting w/clinic leaders, clinic site champions, health system PI and study team members
- Create intentional space to receive and **respond to feedback for improvement**
- **Recognition:** Kudos, Food drop-ins

Interview Findings

Characteristics of Individuals

The Role of Mental health stigma

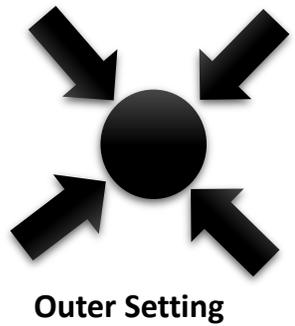

- Knowledge & beliefs of the intervention

Process

The Role and Experience of Site Champions

- Engaging
- Reflecting & evaluating

Outer Setting

Study Theme

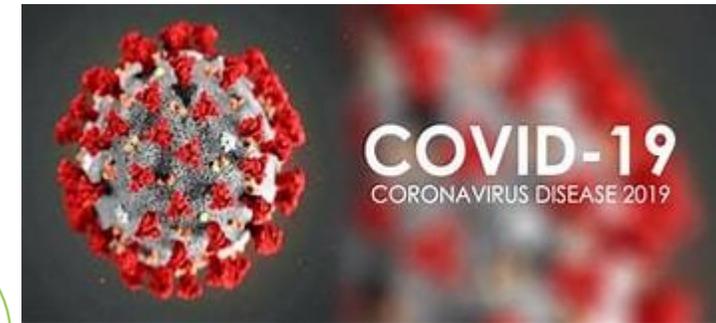

- **COVID-19 and the Adolescent Mental Health Crisis**

Related CFIR Construct

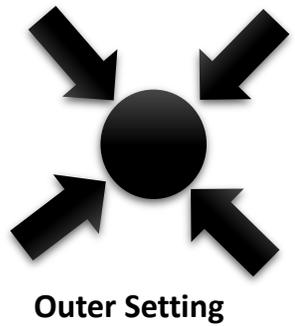

Patient needs and resources

Especially post-COVID, our patients are scoring too high [on the PHQ-9]. We're just seeing such a crisis in mental health, that getting them in that at-risk time, it feels like that window is gone a little bit. What patients want is treatment at this point. I think they're getting the [P2P] handouts and they're excited but then they actually score too high to participate.

(Physician, urban clinic setting, IL)

Outer Setting

Study Theme

- **Racism and Community Response**

Related CFIR Construct

External Policies and Incentives

Racism is everywhere, but it's on fire here. It's so raw and real... in a way that is different than other parts of the country. I think that makes people less trustful of an online program. Like, 'Who is it? Who is my kid going to talk to?' They are terrified of someone being racist toward their child. (Physician, urban setting, KY)

Inner Setting

Advocate as one Health System

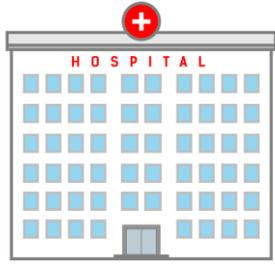

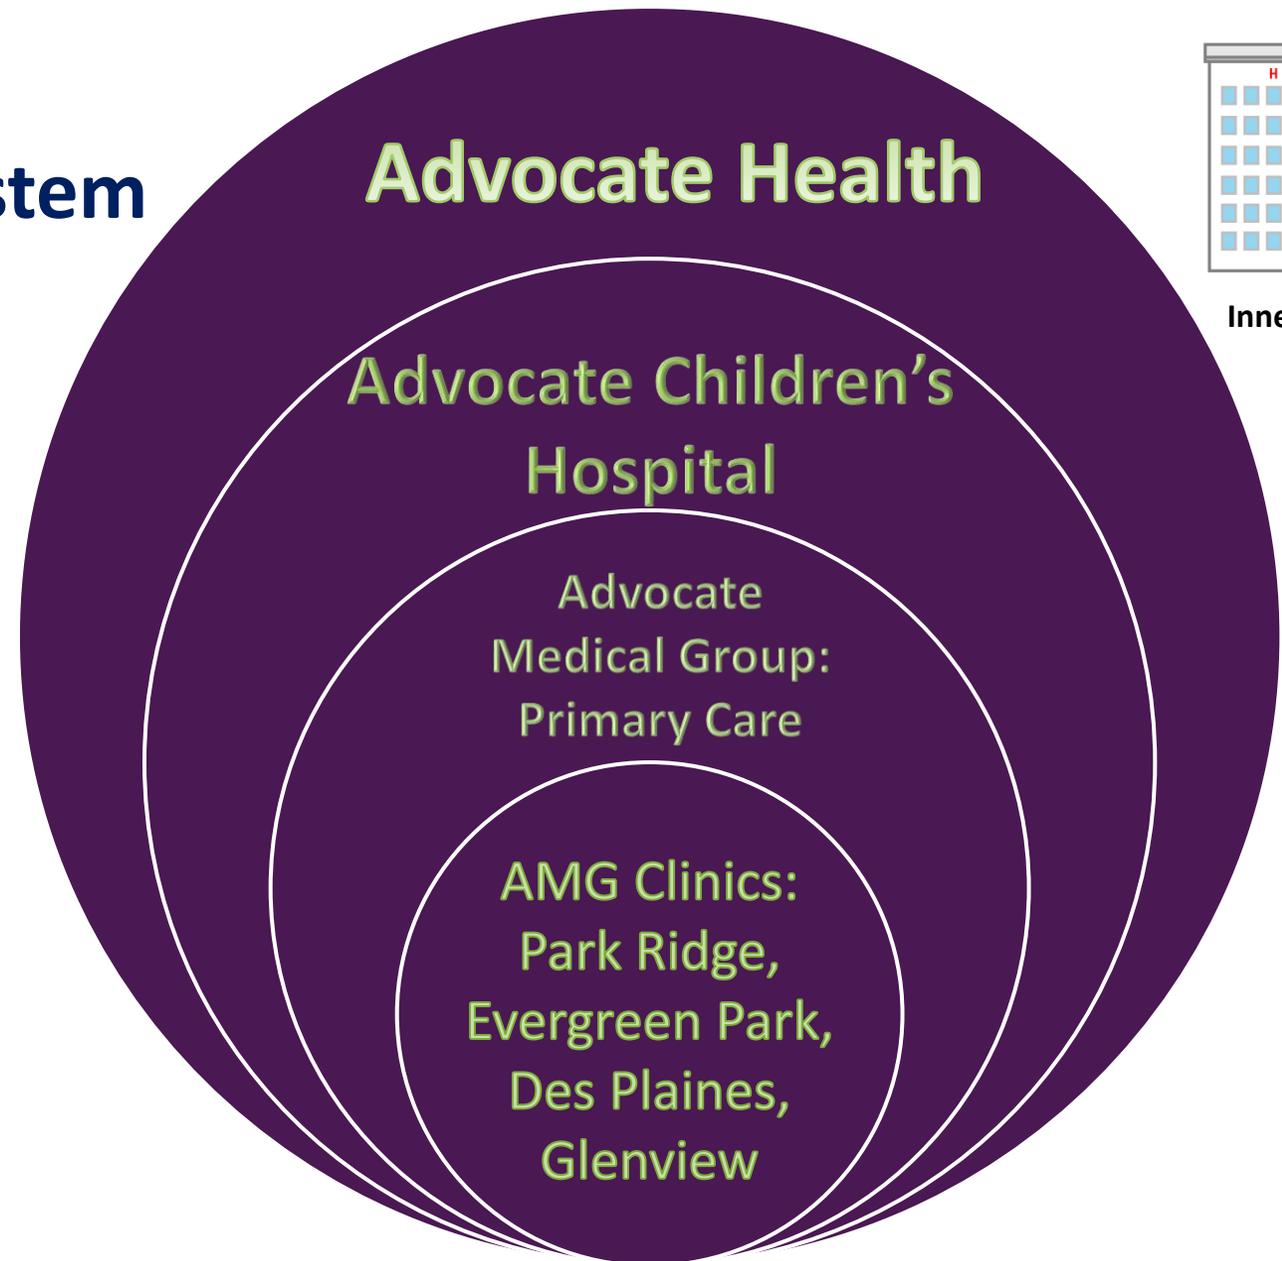

Related CFIR Constructs:

Implementation Climate

Culture

Compatibility

Relative Priority

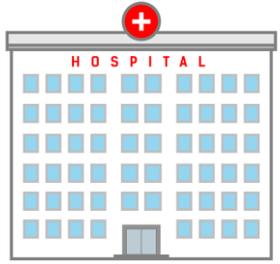

Inner Setting

Study Themes

Provider/Staff Buy-in

*I've been happy to present (P2P) to... families. I think it's a worthwhile project, and I really try and sell families on that. There are so few resources for the[se] teens... the fact that they've not been in a deep, dark depression, they're just in that little place that needs a little help, so we're really trying to sell them on, "Let's catch this before things get worse."
(Nurse Recruiter, suburban setting, IL)*

Inner Setting

Provider/staff Time Constraints

*It's difficult because [we] aren't always available to speak with the family...who are interested in the study, because we do have our own providers to work with, and... other responsibilities in the clinic to take care of
(Staff Recruiter, suburban setting, IL)*

Characteristics of Individuals

Characteristics of
Individuals

Study Theme

- **The Role of Mental Illness Stigma**

Related CFIR Construct

Knowledge and beliefs about the intervention

*The culture around mental health is different here. Mental health is, “Suck it up. Deal with it. Stop being a bad kid.” That’s how parents deal with mental illnesses, so kids have...grown up to think that...
(Physician, rural setting, IL)*

*I find that it’s hard [talking about mental health], depending on the teen’s relationship with the parent...the provider can be a nice liaison for the teen...
(Physician, urban setting, IL)*

Intervention Characteristics

Intervention
Characteristics

Study Theme

- **Perceptions of Online Interventions**
 - Varied by setting

Related CFIR Construct

Relative advantage

*I think [the self-guided internet program] is [worthwhile] because... its online and they can do it remotely, so it makes it a lot easier for the teens
(Staff recruiter, suburban setting, IL)*

*A lot of teens, talking about their life in a group setting online, they're like, "Ooh, [facilitated virtual groups are] not what I want." I think that's really off-putting to people, especially the patient population I care for
(Physician, urban setting, KY)*

Intervention Characteristics

Intervention Characteristics

Study Theme

- **Eligibility Criteria Issues**

Related CFIR Construct

Adaptability, Complexity

A couple of times, I have had patients who didn't qualify, because when they took the [baseline assessments] ... their score is too high. Then they're like, "They didn't even take me." As providers, we don't want to refer people to something that's a possibility, for mental health. That feels dangerous.

(Physician, urban clinic setting, KY)

It just throws us off because we have to go back and look it up. It's like, "What are the ages again? Yes, they raised that. ... When you throw that wrench in there, it's not that it makes it harder for us to keep continuing to get those candidates. It's like, "What was that again? What are the new rules?" (Staff recruiter, suburban setting, IL)

Process

Process

Study Theme

- **The Role and Experience of Site Champions**

Related CFIR Construct

Engaging: Champions; Reflecting & Evaluating

Today I think I heard in one of the calls, that one of our doctors actually referred a couple of kids and they actually got into the program. I just texted him and I said, “Hey, great job! Two kids got into the program. Thanks for doing that.” He goes, “Yes, great. Thank you.” That appreciation, then he’s like, “Hey, I might have another one”.” (Recruiter, rural site, IL)

Lessons Learned

Readiness Planning

Requires time

Stakeholder engagement is critical

Ensure the right site staff are involved

Intervention

Alignment with site priorities

Anticipate outer and inner setting influences

Prepare to Adapt

Retention

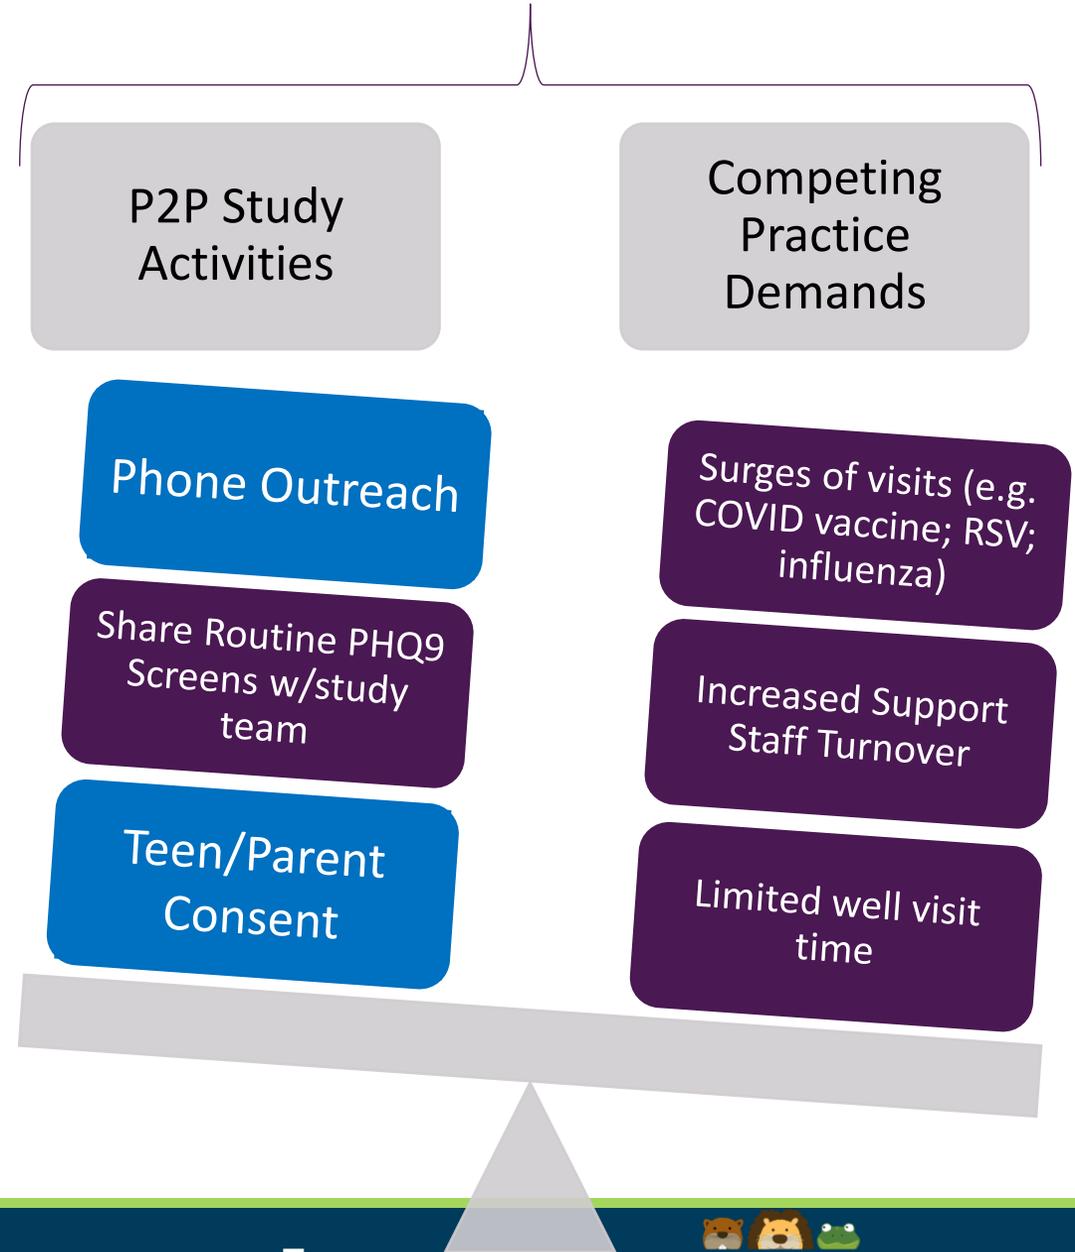

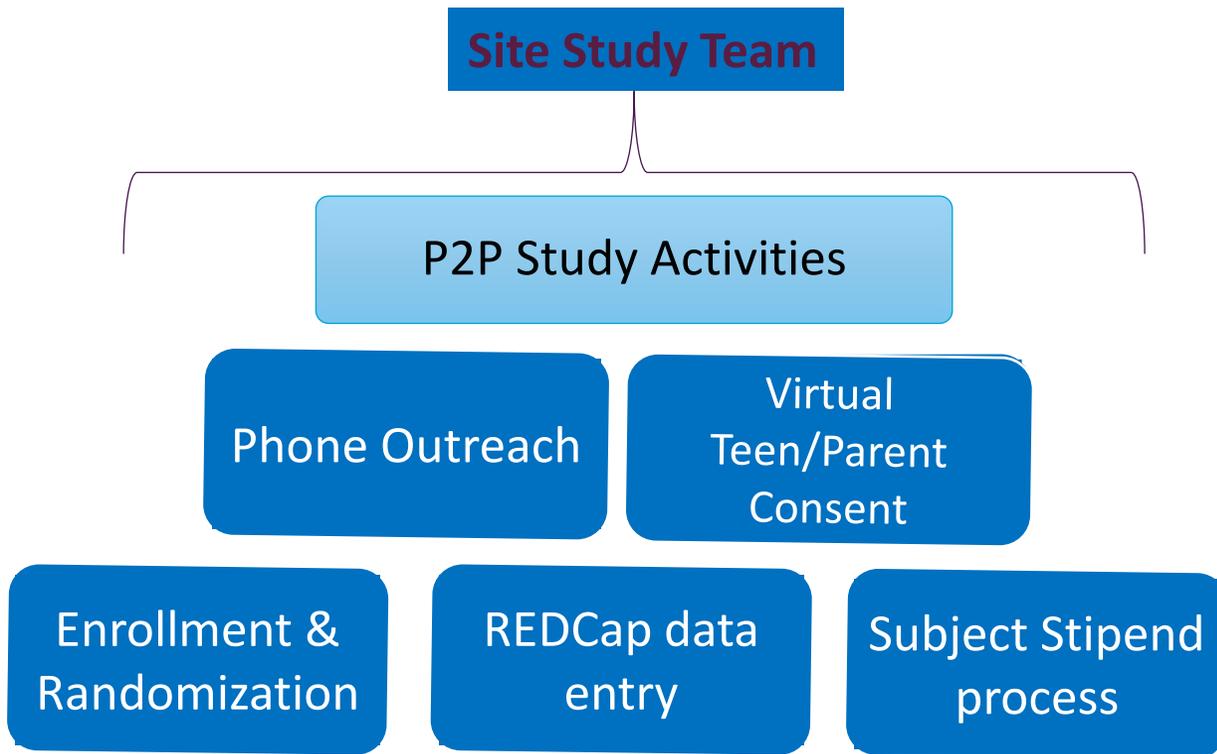

Intentional engagement activities

Consistent and Repetitive interactions

Reassessment of readiness elements

Putting our Findings into Practice – One Health System

Clinical Site Champions & Provider Champions

Next Steps

Implementation Sub-Study:

- Re-evaluate findings to assess impact Revised 2022 CFIR Framework
- Apply findings to enhance remaining study activities (e.g. 2023 will be last summer for enrollment)

P2P Study:

- Complete P2P Enrollment (anticipated Dec 2023)
- Conduct Post-Implementation Evaluation of Implementation to outline successes & failures

*Everyone's life touches someone with a mental health condition. **Good mental health translates to good physical health** ... The inextricable links between mental health and public health, human rights and socioeconomic development mean that **transforming policy and practice in mental health can deliver real, substantive benefits for individuals, communities and countries everywhere.***

WHO Director-General Dr Tedros Adhanom Ghebreyesus
